

## TQ 401 / EA 401 / IQS 450

# Proximity measuring system

#### **FEATURES**

- From the Vibro-Meter® product line
- Non-contact measurement system based on eddy current principle
- Certified for use in potentially explosive atmospheres
- 5 m and 10 m systems
- Temperature compensated system
- Voltage or current output with protection against short circuits
- Frequency response: DC to 20 kHz (-3 dB)
- Measuring range:2 mm
- Temperature range: -40 to +180°C

#### **DESCRIPTION**

This proximity system allows contactless measurement of the relative displacement of moving machine elements. It is particularly suitable for measuring the relative vibration and axial position of rotating machine shafts, such as those found in steam, gas and hydraulic turbines, as well as in alternators, turbo-compressors and pumps.

The system is based around a TQ 401 non-contact transducer and an IQS 450 signal conditioner. Together, these form a calibrated proximity system in which each component is interchangeable. The system outputs a voltage or current proportional to the distance between the transducer tip and the target, such as a machine shaft.

Information contained in this document may be subject to Export Control Regulations of the European Union, USA or other countries. Each recipient of this document is responsible for ensuring that transfer or use of any information contained in this document complies with all relevant Export Control Regulations. ECN N/A.

#### **DESCRIPTION** (continued)

The active part of the transducer is a coil of wire that is moulded inside the tip of the device, made of Torlon® (polyamide-imide). The transducer body is made of stainless steel. The target material must, in all cases, be metallic.

The transducer body is available with metric or imperial thread. The TQ 401 has an integral coaxial cable, terminated with a self-locking miniature coaxial connector. Various cable lengths (integral and extension) may be ordered.

The IQS 450 signal conditioner contains a high-frequency modulator/demodulator that supplies a driving signal to the transducer. This generates the

necessary electro-magnetic field used to measure the gap. The conditioner circuitry is made of high-quality components and is mounted in an aluminium extrusion.

The TQ 401 transducer can be matched with a single EA 401 extension cable to effectively lengthen the front-end. Optional housings, junction boxes and interconnection protectors are available for the mechanical and environmental protection of the connection between the integral and extension cables.

The proximity system can be powered by associated signal processing modules (for example, VM600 cards) or a rack power supply.

#### **SPECIFICATIONS**

## Overall proximity system

## Operation

Sensitivity

Ordering option B11 : 8 mV/μm (200 mV/mil)
 Ordering option B12 : 2.5 μA/μm (62.5 μA/mil)

Linear measuring range (typical)

Ordering option B11
 O.2 to 2.2 mm, corresponding to a −1.6 to −17.6 V output
 Ordering option B12
 0.2 to 2.2 mm, corresponding to a −15.5 to −20.5 mA output

Linearity : See Performance curves on page 4

Frequency response : DC to 20 kHz (-3 dB)

Interchangeability of elements : All components in system are interchangeable

#### **Environmental – explosive atmospheres**

Available in Ex approved versions for use in hazardous locations

Type of protection Ex i: intrinsic safety

 $\Lambda$ 

For specific parameters of the mode of protection concerned and special conditions for safe use, please refer to the certificates that are available from Meggitt SA on demand.

## System calibration

Calibration temperature : +23°C ± 5°C

Target material : VCL 140 steel (1.7225)

Note: If special calibration is required, please define the alloy precisely or supply a sample of alloy (min. Ø30 mm / 1 cm thick) according to Meggitt Sensing Systems' drawing number PZ 7009/1.

## Total system length

The total system length (TSL) is the sum of the length of the TQ 4xx transducer's integral cable and the length of the EA 40x extension cable. The supported TSLs can be obtained from different combinations of cables.

Total system lengths

• 5 m : 0.5 m integral cable + 4.5 m extension cable 1.0 m integral cable + 4.0 m extension cable

1.5 m integral cable + 3.5 m extension cable 2.0 m integral cable + 3.0 m extension cable 5.0 m integral cable with no extension cable

• 10 m : 0.5 m integral cable + 9.5 m extension cable

1.0 m integral cable + 9.0 m extension cable 1.5 m integral cable + 8.5 m extension cable 2.0 m integral cable + 8.0 m extension cable

The combination of cables selected for a particular total system length depends on the application. For example, to obtain the optimum location for the separation between the integral and extension cables or to eliminate the requirement for an extension cable.

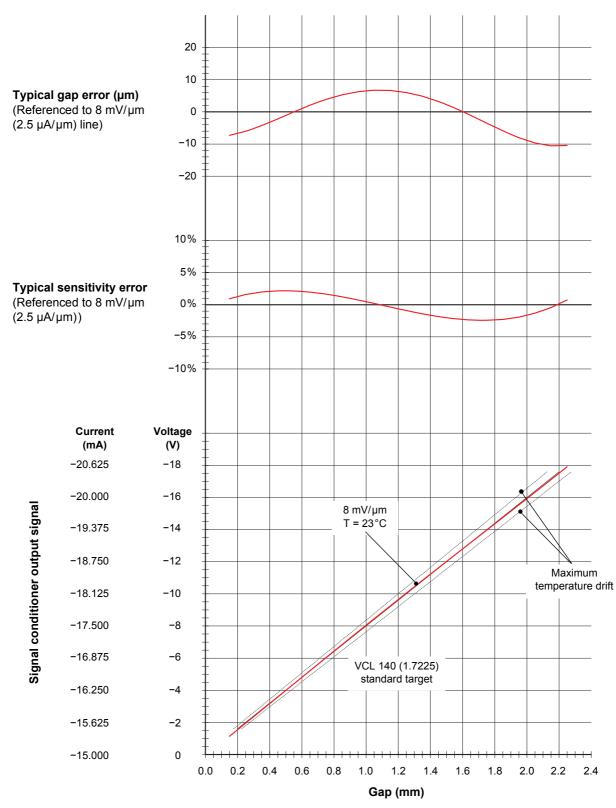

#### Total system length trimming

Due to the characteristics of the coaxial cable, an "electrical trimming" of the nominal length of extension cables is necessary to optimize the system performance and the transducer interchangeability.

TSL for a 5 m measuring chain : 4.4 m minimum TSL for a 10 m measuring chain : 8.5 m minimum

#### Performance curves for TQ 401 with IQS 450

Proximity transducer: TQ 401
Signal conditioner: IQS 450
Standard target material: VCL 140 (1.7225)

Equivalent materials: A 37.11 (1.0065), AFNOR 40 CD4, AISI 4140

## TQ 401 proximity transducer and EA 401 extension cable

#### General

Transducer input requirements : High-frequency power source from an IQS 450 signal conditioner

#### **Environmental**

Temperature ranges

• Transducer : -40 to +180°C with drift < 5% (operation).

+180 to +220°C with drift > 5% (short-term survival).

• Transducer and cable : -40 to +195°C if used in an Ex zone

Cable and connector
 Heat-shrinkable sleeve
 -40 to +200°C
 -40 to +135°C

Protection rating : The head of the proximity transducer (transducer tip and integral cable)

is rated IP68

Vibration : 5 g peak between 10 and 500 Hz

Shock acceleration : 15 g peak (half sine-wave, 11 ms duration)

(according to IEC 60068-2-27)

(according to IEC 60068-2-26)

## **Physical characteristics**

(according to IEC 60529)

Transducer construction : Wire coil Ø5 mm, Torlon (polyamide-imide) tip, encapsulated in

stainless steel body (AISI 316L) with high-temperature epoxy glue

Integral and extension cables : FEP covered 50  $\Omega$  coaxial cable, Ø2.65 or Ø3.6 mm

Connectors : Self-locking miniature coaxial connectors.

Note: When connecting, these should be hand-tightened until locked.

Optional protection

 Flexible stainless steel hose (protection tube)

 Heat-shrinkable sleeve (modified Polyolefin) : The stainless steel hose provides additional mechanical protection but is not leak-tight.

: The heat-shrinkable sleeve provides additional mechanical and electrical protection.

## IQS 450 signal conditioner

## **Output**

Voltage output, 3-wire configuration

Voltage at min. GAP
 Voltage at max. GAP
 Dynamic range
 Output impedance
 Short-circuit current
 -1.6 V
 -17.6 V
 500 Ω
 45 mA

Current output, 2-wire configuration

Current at min. GAP
 Current at max. GAP
 Dynamic range
 5 mA
 Output capacitance
 1 nF
 Output inductance
 100 µH

#### Supply

Voltage output, 3-wire configuration

• *Voltage* : -20 V to -32 V\*

• Current : −13 ±1 mA (−25 mA max.)

Current output, 2-wire configuration

Voltage
 Current
 -20 V to -32 V\*
 -15.5 to -20.5 mA

Supply input capacitance : 1 nF Supply input inductance : 100 µH

#### **Environmental**

Temperature ranges

• Operation : −35 to +85°C\*.

0 to +70°C if used in an Ex zone.

• Storage : -40 to +85°C

Humidity : Max. 95% non condensing.

100% condensing (not submerged).

Protection rating : IP4

(according to IEC 60529)

Vibration : 2 g peak between 10 and 55 Hz

(according to IEC 60068-2-26)

Shock acceleration : 15 g peak (half sine-wave, 11 ms duration)

(according to IEC 60068-2-27)

## **Physical characteristics**

Construction material : Injection moulded aluminium

<sup>\*</sup>See Thermal considerations on page 7.

#### **Electrical connections**

Input : Self-locking miniature coaxial connector (female).

Note: When connecting, this should be hand-tightened, until locked.

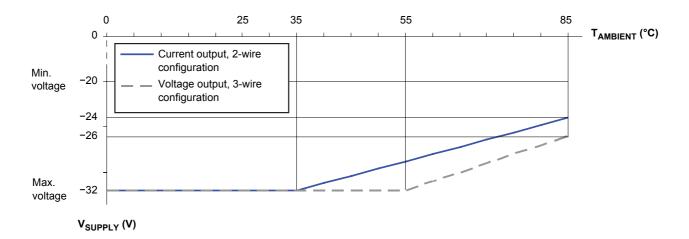

Output and power : Screw terminal strip

Weight

Standard version : 140 g (approx.) Ex version : 220 g (approx.)

## Thermal considerations

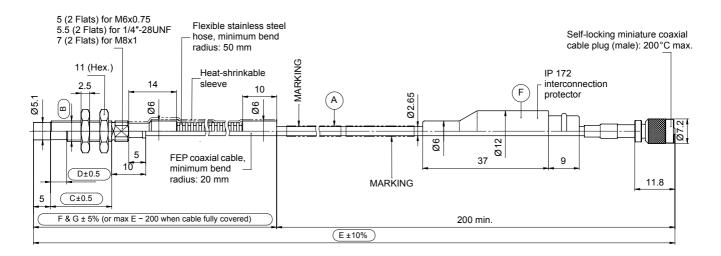

The IQS 450 signal conditioner will operate at ambient temperatures as high as 85°C, but to do so, it requires derating of the maximum input voltage. The IQS 450 must operate between the minimum supply voltage and the maximum supply voltage, as shown on the following graph.

total system length, see Total system length on page 3. For information on cable

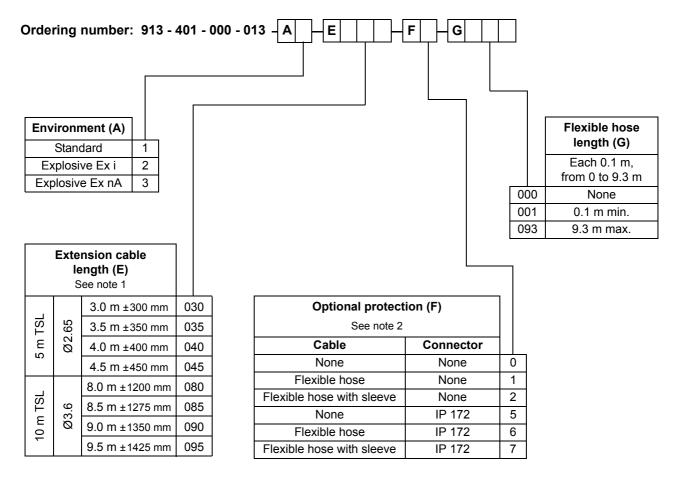

length tolerances, see Total system length trimming on page 3.

## **MECHANICAL DRAWINGS AND ORDERING INFORMATION** (continued)

#### EA 401 extension cable

## Notes

All dimensions are in mm unless otherwise stated.

- 1. The total system length = TQ 401 integral cable length + Extension cable length (E).

  For information on combining integral and extension cables to obtain a particular total system length, see Total system length on page 3.

  For information on cable length tolerances, see Total system length trimming on page 3.
- 2. When optional protection such as a flexible stainless steel hose with or without a heat-shrinkable sleeve is ordered:

  Flexible hose length (G) max. = Extension cable length (E) 150 mm, for an extension cable that is protected to the maximum extent possible ("cable fully covered").

Headquartered in the UK, Meggitt PLC is a global engineering group specializing in extreme environment components and smart sub-systems for aerospace, defence and energy markets.

Meggitt Sensing Systems is the operating division of Meggitt specializing in sensing and monitoring systems, which has operated through its antecedents since 1927 under the names of ECET, Endevco, Ferroperm Piezoceramics, Lodge Ignition, Sensorex, Vibro-Meter and Wilcoxon Research. Today, these operations are integrated under one strategic business unit called Meggitt Sensing Systems, headquartered in Switzerland and providing complete systems, using these renowned brands, from a single supply base.

The Meggitt Sensing Systems facility in Fribourg, Switzerland was formerly known as Vibro-Meter SA, but is now Meggitt SA. This site produces a wide range of vibration and dynamic pressure sensors capable of operation in extreme environments, leading-edge microwave sensors, electronics monitoring systems and innovative software for aerospace and land-based turbo-machinery.

All statements, technical information, drawings, performance rates and descriptions in this document, whilst stated in good faith, are issued for the sole purpose of giving an approximate indication of the products described in them, and are not binding on Meggitt SA unless expressly agreed in writing. Before acquiring this product, you must evaluate it and determine if it is suitable for your intended application. Unless otherwise expressly agreed in writing with Meggitt SA, you assume all risks and liability associated with its use. Any recommendations and advice given without charge, whilst given in good faith, are not binding on Meggitt SA.

Meggitt Sensing Systems takes no responsibility for any statements related to the product which are not contained in a current Meggitt Sensing Systems publication, nor for any statements contained in extracts, summaries, translations or any other documents not authored by Meggitt Sensing Systems.
