

# **MEGGITT** smart engineering for extreme environments

# TQ 423 / EA 403 / IQS 450

# Proximity measuring system

# FEATURES

- >> From the Vibro-Meter® product line
- Designed for high-pressure applications
- Non-contact measurement system based on eddy current principle
- Certified for use in potentially explosive atmospheres
- >> 5 m and 10 m systems
- >> Temperature compensated system
- Voltage or current output with protection against short circuits
- Frequency response: DC to 20 kHz (-3 dB)
- Measuring range: 12 mm
- Temperature range: -25 to +140°C

# DESCRIPTION

This proximity system allows contactless measurement of the relative displacement of moving machine elements. The system is based around a TQ 423 non-contact transducer and an IQS 450 signal conditioner. Together, these form a calibrated proximity system in which each component is interchangeable. The system outputs a voltage or current proportional to the distance between the transducer tip and the target, such as a machine shaft. The TQ 423 is specially designed for high-pressure applications, with the transducer tip withstanding pressures of up to 100 bar. This makes it particularly suitable for measuring relative displacement on submerged pumps and various types of hydraulic turbines (for example, Kaplan and Francis).

Information contained in this document may be subject to Export Control Regulations of the European Union, USA or other countries. Each recipient of this document is responsible for ensuring that transfer or use of any information contained in this document complies with all relevant Export Control Regulations. ECN N/A.

# Proximity measuring system TQ 423 / EA 403 / IQS 450

# MEGGITT

# **DESCRIPTION** (continued)

The active part of the transducer is a coil of wire that is moulded inside the tip of the device, made of PEEK (polyetheretherketone). The transducer body is made of stainless steel. The target material must, in all cases, be metallic.

The transducer body is available only with metric thread. The TQ 423 has an integral coaxial cable, terminated with a self-locking miniature coaxial connector. Various cable lengths (integral and extension) may be ordered.

The IQS 450 signal conditioner contains a highfrequency modulator/demodulator that supplies a driving signal to the transducer. This generates the necessary electromagnetic field used to measure the

gap. The conditioner circuitry is made of high-quality components and is mounted in an aluminium extrusion.

The TQ 423 transducer can be matched with a single EA 403 extension cable to effectively lengthen the front-end. Optional housings, junction boxes and interconnection protectors are available for the mechanical and environmental protection of the connection between the integral and extension cables.

The proximity system can be powered by associated signal processing modules (for example, VM600 cards) or a rack power supply.

Type of protection Ex nA: non-sparking apparatus		
Europe	Voluntary type examination certificate	LCIE 11 ATEX 1010 X II 3G (zone 2) Ex nA II T6 to T3 Gc
International	IECEx certificate of conformity	IECEx LCI 11.0063X Ex nA II T6 to T3 Gc
North America	CCSAUS certificate of compliance	1514309 Class I, Division 2, Groups A, B, C, D

### For specific parameters of the mode of protection concerned and special conditions for safe use, please refer to the certificates that are available from Meggitt SA on demand.

### System calibration

Calibration temperature	: +23°C ± 5°C
Target material	: VCL 140 steel (1.7225)

Note: If special calibration is required, please define the alloy precisely or supply a sample of alloy (min. Ø60 mm / 1 cm thick) according to Meggitt Sensing Systems' drawing number PZ 7009/1.

### **Total system length**

The total system length (TSL) is the sum of the length of the TQ 4xx transducer's integral cable and the length of the EA 40x extension cable. The supported TSLs can be obtained from different combinations of cables.

Total system lengths

• 5 m	: 1.0 m integral cable + 4.0 m extension cable
	5.0 m integral cable with no extension cable
• 10 m	: 1.0 m integral cable + 9.0 m extension cable
	5.0 m integral cable + 5.0 m extension cable
	10.0 m integral cable with no extension cable

The combination of cables selected for a particular total system length depends on the application. For example, to obtain the optimum location for the separation between the integral and extension cables or to eliminate the requirement for an extension cable.

#### Total system length trimming

Due to the characteristics of the coaxial cable, an "electrical trimming" of the nominal length of extension cables is necessary to optimize the system performance and the transducer interchangeability.

TSL for a 5 m measuring chain	: 4.4 m minimum
TSL for a 10 m measuring chain	: 8.8 m minimum

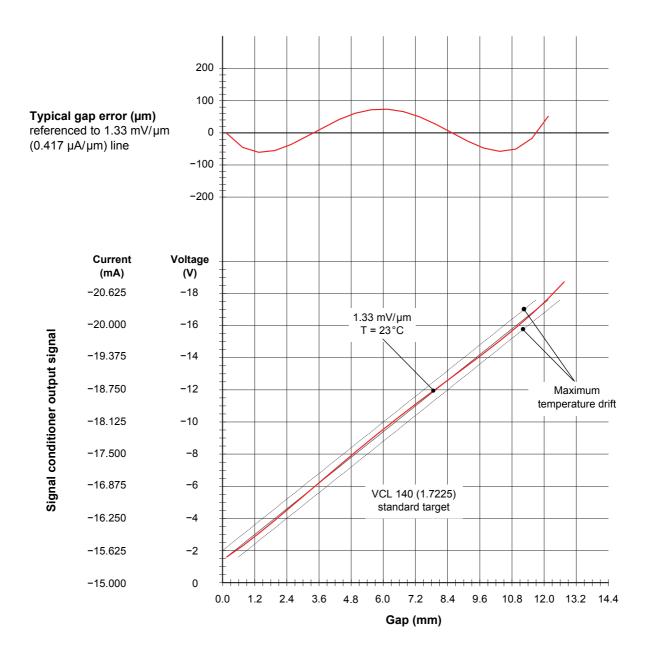

TSL for a 10 m	measuring chain

# **SPECIFICATIONS** (continued)

# Performance curves for TQ 423 with IQS 450

Proximity transducer:	TQ 423
Signal conditioner:	IQS 450
Standard target material:	VCL 140 (1.7225)
Equivalent materials:	A 37.11 (1.0065), AFNOR 40 CD4, AISI 4140

# TQ 423 proximity transducer and EA 403 extension cable

## General

Transducer input requirements

: High-frequency power source from an IQS 450 signal conditioner

# Environmental

- Temperature ranges
- Transducer
- Transducer and cable
- Cable and connector
- Maximum pressures
- Transducer tip
- Transducer/cable assembly

Protection rating (according to IEC 60529) Vibration (according to IEC 60068-2-26) Shock acceleration (according to IEC 60068-2-27)

# **Physical characteristics**

Transducer construction

Integral and extension cables Connectors

Optional protection

- Flexible stainless steel hose (protection tube)
- FEP sheath (extruded fluorinated ethylene propylene)

- : -25 to +140 °C with drift < 5%
- : -40 to +195°C if used in an Ex zone
- : -40 to +200°C
- : 100 bar
- : 10 bar (with flexible hose option).
- 1 bar (without flexible hose option).
- : The head of the proximity transducer (transducer tip and integral cable) is rated IP68
- : 5 g peak between 10 and 500 Hz
- : 15 g peak (half sine-wave, 11 ms duration)
- : Wire coil Ø18 mm, PEEK (polyetheretherketone) tip, encapsulated in stainless steel body (1.4435) with high-temperature epoxy glue
- : FEP covered 70  $\Omega$  coaxial cable, Ø3.6 mm
- : Self-locking miniature coaxial connectors. Note: When connecting, these should be hand-tightened until locked.
- : The stainless steel hose of the TQ 423 provides additional mechanical protection and is leak-tight. The stainless steel hose of the EA 403 provides additional mechanical
- protection but is not leak-tight. : The FEP sheath of the EA 403 provides resistance to almost all
- chemicals and low permeability to liquids, gases and moisture. It is also flexible, low friction and mechanically tough.

Output and power	: Screw terminal strip
Weight	
Standard version	: 140 g (approx.)
Ex version	: 220 g (approx.)

# **Thermal considerations**

The IQS 450 signal conditioner will operate at ambient temperatures as high as 85°C, but to do so, it requires derating of the maximum input voltage. The IQS 450 must operate between the minimum supply voltage and the maximum supply voltage, as shown on the following graph.

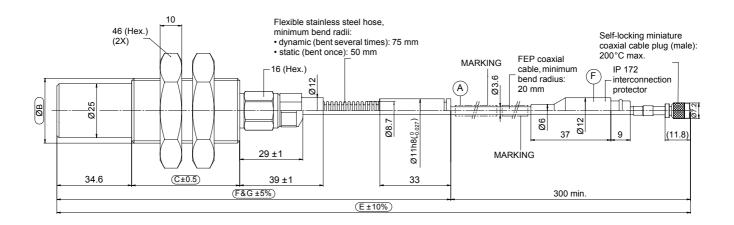

V<sub>SUPPLY</sub> (V)

Notes

All dimensions are in mm unless otherwise stated.

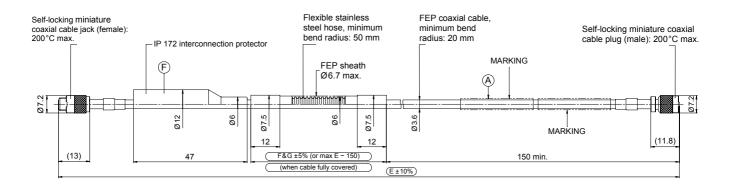

1. The Total system length (H) = Integral cable length (E) + EA 403 extension cable length.

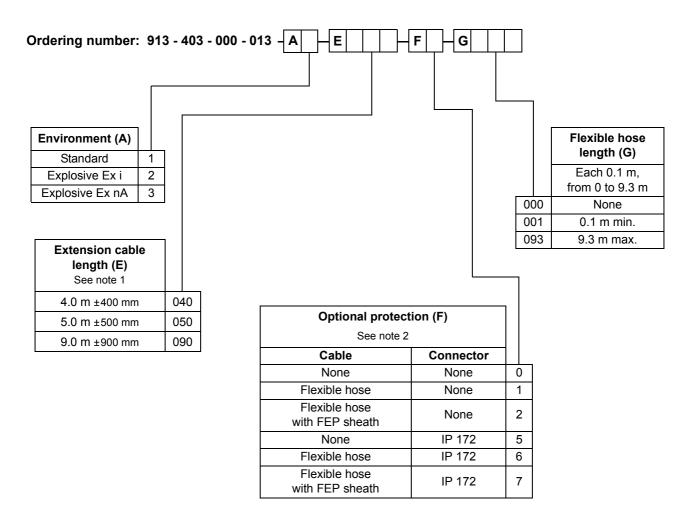

For information on combining integral and extension cables to obtain a particular total system length, see Total system length on page 3. For information on cable length tolerances, see Total system length trimming on page 3.

# **MECHANICAL DRAWINGS AND ORDERING INFORMATION** (continued)

# EA 403 extension cable

#### Notes

All dimensions are in mm unless otherwise stated.

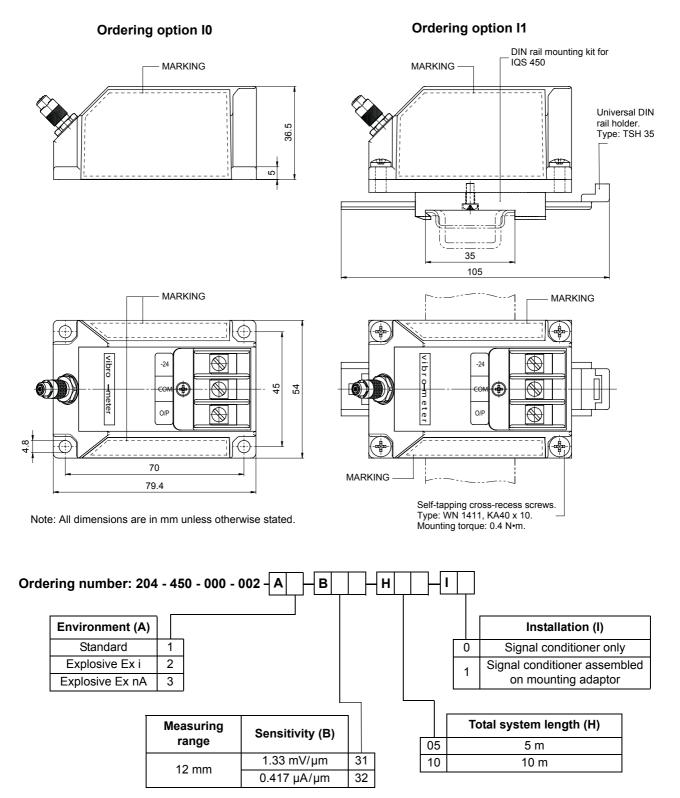

- 1. The total system length = TQ 423 integral cable length + Extension cable length (E). For information on combining integral and extension cables to obtain a particular total system length, see Total system length on page 3. For information on cable length tolerances, see Total system length trimming on page 3.
- When optional protection such as a flexible stainless steel hose with or without an FEP sheath is ordered: Flexible hose length (G) max. = Extension cable length (E) – 150 mm, for an extension cable that is protected to the maximum extent possible ("cable fully covered").

# MEGGITT

Headquartered in the UK, Meggitt PLC is a global engineering group specializing in extreme environment components and smart sub-systems for aerospace, defence and energy markets.

Meggitt Sensing Systems is the operating division of Meggitt specializing in sensing and monitoring systems, which has operated through its antecedents since 1927 under the names of ECET, Endevco, Ferroperm Piezoceramics, Lodge Ignition, Sensorex, Vibro-Meter and Wilcoxon Research. Today, these operations are integrated under one strategic business unit called Meggitt Sensing Systems, headquartered in Switzerland and providing complete systems, using these renowned brands, from a single supply base.

The Meggitt Sensing Systems facility in Fribourg, Switzerland was formerly known as Vibro-Meter SA, but is now Meggitt SA. This site produces a wide range of vibration and dynamic pressure sensors capable of operation in extreme environments, leading-edge microwave sensors, electronics monitoring systems and innovative software for aerospace and land-based turbo-machinery.

All statements, technical information, drawings, performance rates and descriptions in this document, whilst stated in good faith, are issued for the sole purpose of giving an approximate indication of the products described in them, and are not binding on Meggitt SA unless expressly agreed in writing. Before acquiring this product, you must evaluate it and determine if it is suitable for your intended application. Unless otherwise expressly agreed in writing with Meggitt SA, you assume all risks and liability associated with its use. Any recommendations and advice given without charge, whilst given in good faith, are not binding on Meggitt SA.
